

REGENAGRI

The Regenagri programme is focused on promoting regenerative agriculture practices for the health of the land and the well-being of communities. It supports farmers and organisations in transitioning to holistic farming methods that improve soil health, promotes biodiversity, and reduce greenhouse gas emissions. The programme offers opportunities for farmers to access funding through carbon credit markets and environmental subsidies.

The Regenagri Carbon Programme focuses on carbon sequestration in agricultural soils and encourages farmers to participate in grouped projects to make the administration process more manageable. The Regenagri Content Standard is a voluntary standard that provides certification for materials originating from farms certified to the Regenagri Standard, aiming to increase regenerative agriculture production and provide transparency in the supply chain. The criteria for the Regenagri Standard assess the farm's regenerative impact and are supported by practical knowledge, expert input, and on-farm data. The standard is intended to be used as a tool for measuring key indicators that have a direct effect on soil health, biodiversity, and emissions reduction.

WHAT WE CAN ASSIST WITH:

At Peterson Projects & Solutions, we can assist your business in complying with Regenagri Certification from the early phase to the end phase. Our Regenagri Consultancy Service approach is already in accordance with the requirements and guidance from the most up-to-date version. Let us help your business achieve Regenagri compliance smoothly and efficiently.

We can offer you assistance in Regenagri scheme certification consultancy which includes:

1. Supporting Documents preparation for audit
2. Provide Risk Analysis and Gap Assessment on your current practice
3. Develop Strategy and Implementation Plan specific for your business
4. Due Diligence assistance
5. Provide in-house training on global trading standard
