

With the global issue nowadays on environmental-friendly and sustainability product especially for energy, industrial application, food and non-food products. This leads to sustainable practice which is apply to almost any industries. Sustainable practices require strong commitment in order to get certified. From basic location selection, management and quality requirements, environment, business principles, equipment handling, documentation and records, and many other requirements. All of this are fulfilled in order to get ISCC Certification for your product and labeled "ISCC-Certified" to your consumer.

The ISCC scheme is designed to contribute to the implementation of environmentally, socially and economically sustainable production and use of all kinds of biomass in global supply chains. The good supply chain management could provide good traceability throughout the supply chain. It will enables each player to source sustainable products from any certificate holder. The ISCC certifications are usually divided into ISCC Plus, ISCC EU, ISCC Solid Biomass NL, ISCC Non-GMO and ISCC CORSIA.

The ISCC certification scopes distinguish the following supply chain actors:

- Primary producers, certification not mandatory (farm, plantations, points of origin of waste and residues).
- First gathering points/collecting points.
- Conversion units (output intermediate products or final fuel).
- Traders of raw/intermediate materials or final fuel.
